Summary

Early-career **Agentic AI Engineer** with hands-on experience building **LLM-powered systems**, **RAG pipelines**, and **multi-agent workflows** using **LangChain**, **LangGraph**, and **CrewAI**. Proficient in **Python** and **Java** with strong backend engineering across **FastAPI** and **Spring Boot**. Experienced in **hybrid retrieval**, **embedding-based search**, **AI system evaluation**, and **prompt engineering**. Familiar with **AWS**, **Docker**, and **CI/CD pipelines**.

Experience

IQ Innovation Hub LLP <i>Software Engineer</i>	May 2025 – Present <i>Pune, India</i>
Agentic AI Systems: Engineered a LangGraph-based multi-agent assistant with tool execution, task routing, and multi-step reasoning over complex Excel datasets using BM25 + Pinecone hybrid search with re-ranking, increasing answer precision by 45%. RAG Pipelines: Designed production-grade RAG workflows with hybrid retrieval (vector + keyword), grounding strategies, and retrieval quality improvements, boosting response relevance by 40% and reducing hallucinated outputs. AI System Evaluation: Built evaluation datasets and regression test suites to validate pipeline behavior, monitor non-deterministic LLM outputs, and track response quality across model updates ensuring production reliability. Meeting Intelligence (Agentic Pipeline): Deployed a multi-step LLM orchestration system processing 100+ sessions via Zoom/Teams bots, automating transcript generation, topic extraction, and task assignment with 92%+ accuracy, reducing manual effort by 70%. Security & Guardrails: Enforced prompt validation, input sanitization, and output guardrails to handle non-deterministic AI behavior, reducing unsafe or malformed outputs by 60% in production. Performance & Deployment: Applied Redis caching to reduce inference latency by 50%; containerized AI services with Docker and integrated CI/CD pipelines, cutting deployment time by 40% with reproducible environments. Asynchronous & Event-Driven Workflows: Contributed to asynchronous and event-driven AI pipelines for document processing and retrieval orchestration, reducing synchronous processing overhead by 45% and improving workflow scalability under concurrent load. Observability & Reliability: Implemented structured logging, performance monitoring & reliability tracking for production AI services, improving debugging efficiency by 40% & increasing operational visibility across deployed workloads. Evaluation Frameworks: Built evaluation workflows for retrieval quality, hallucination reduction, and response relevance validation, improving GenAI response accuracy by 35% and enabling continuous regression testing across production releases.	

Projects

Git-Talk AI <i>Python, FastAPI, LangChain, LangGraph, Gemini API, Pinecone</i>	GitHub Live
- Architected a RAG-based agentic system with multi-step reasoning, tool calling, and hybrid vector + keyword retrieval with re-ranking, improving retrieval accuracy by 40% and cutting onboarding time by 50%. - Implemented evaluation strategies to monitor retrieval quality and agent response consistency across non-deterministic LLM outputs, reducing irrelevant responses by 35%.	

Technical Skills

Languages:	Python, Java, SQL, JavaScript (ES6+), HTML5, CSS3, FastAPI, Spring Boot
GenAI & LLM:	LangChain, LangGraph, CrewAI, Prompt Engineering, Tool Calling, Multi-Agent Orchestration
RAG & Retrieval:	Hybrid Search, Pinecone, FAISS, Re-ranking, Grounding Strategies, Retrieval Evaluation
AI Evaluation:	Evaluation Datasets, Regression Testing, Behavior Monitoring, Non-deterministic Output Handling
Databases:	PostgreSQL, MySQL, MongoDB, Redis
Cloud & DevOps:	AWS (EC2, S3, RDS, Lambda), Docker, Kubernetes, Jenkins CI/CD

Education

Centre for Development of Advanced Computing <i>Post Graduate Diploma - Advanced Computing</i>	Aug 2024 – Feb 2025 <i>Pune, India</i>
AISSMS College of Engineering <i>Bachelor of Engineering (B.E) - Computer Engineering</i>	Aug 2020 – June 2024 <i>Pune, India</i>
